

Our practice takes part in Disease Surveillance

Would you like to help?

If you are experiencing **flu-like symptoms** (with symptom onset being less than 10 days) then please ask for a **virology swab**. You can take part even if you've recently had a negative PCR test for **COVID-19**.

If you are attending your practice for a **routine blood test**, also consider asking about giving an additional vial of blood for **research** on immunity.

Patient Information Sheets are available for further information.

If you wish to participate, please speak to a member of our team.
